SUMMARY

Full-stack engineer and tech lead with 15+ years building and scaling production web applications in PHP, Laravel, TypeScript, Vue.js, React and Node.js, mostly remote with teams in North America and Europe. Most at home owning a system end to end, from architecture, REST APIs and database design (MySQL, PostgreSQL) to CI/CD, Docker deployments on AWS, performance tuning and production support. Most recently a core contributor at the Public Knowledge Project from 2022 to 2026.

HIGHLIGHTS

- Top 10 all-time contributor to Open Journal Systems (OJS), the publishing platform behind 58,000+ journals in 156 countries, with 1,000+ commits.
- 15 open-source Laravel packages with 195k+ installs. laravel-model-sanitize was featured on Laravel News.
- Leading engineering teams since 2017, up to 12 people, across 80+ client web and mobile projects.

SKILLS

Languages: PHP, TypeScript, JavaScript, Go, Ruby, SQL
Backend: Laravel, Symfony, Node.js, Ruby on Rails, REST APIs, GraphQL, WebSockets, microservices, OAuth2, JWT
Frontend: Vue.js, Nuxt, Pinia, React, Inertia, Livewire, Tailwind CSS
Database: MySQL, MariaDB, PostgreSQL, SQLite, Redis
Cloud and DevOps: AWS (EC2, S3, RDS, SQS), Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Git, Linux, GCP
Testing and quality: PHPUnit, Pest, Cypress, test-driven development (TDD), code review
Security: role-based access control (RBAC), tenant data isolation (GDPR), input sanitization, secure code review
AI tooling: Claude, GitHub Copilot (daily use for development and code review)
Practices: system design, multi-tenant SaaS, queues and scheduling (Laravel Horizon), Agile, technical leadership, mentoring

EXPERIENCE

Lead Architect & Developer
Apr 2023 - Present | Part-time
Dentall Manager | *Netherlands (Remote)*

- Lead architect of a multi-tenant SaaS ERP for Dutch dental and medical practices, built on Laravel, Vue.js and Node.js, and head of the 8-person team that runs it.
- 100% uptime since launch, serving thousands of users across all tenants.
- Database-per-tenant design on AWS, with separate databases, asset storage and role-based access control (RBAC) for each tenant, keeps all tenant data isolated under GDPR.
- Built a workflow engine where tenant admins define their own triggers and conditions. It compiles them into queries at runtime, so process changes no longer need an engineering ticket.
- Billing runs on Stripe; queues, sessions and caching run on Redis under Laravel Horizon.

Software Developer (Core Contributor)
Apr 2022 - Sep 2026 | Full-time
Public Knowledge Project (PKP), Simon Fraser University | *Vancouver, Canada (Remote)*

- Brought Laravel's Eloquent ORM, routing, queues, scheduler and Blade into the non-Laravel PHP core of Open Journal Systems, cutting long-standing technical debt.
- 1,000+ merged commits and 300+ pull requests across OJS, Open Monograph Press (OMP), Open Preprint Systems (OPS) and pkp-lib, plus 150+ reviews of core and community pull requests.
- Shipped bug fixes and security patches to the 58,000+ journal install base and handled third-party integrations with outside vendors.

- Improved the submission, peer review and publication workflows, along with the overall app infrastructure and security, that editors and authors use every day.

Team Lead & Manager Jan 2020 - Mar 2022 | Full-time

Developer Squad | Buffalo, New York, USA (Remote)

- Led an engineering team of 5 to 10 building and running client platforms that brought in close to US$500K a month combined.
- Main technical contact for clients from scoping and planning through release, with projects landing on time and on budget.
- Set the team's technical direction and code-review standards, and mentored developers on client and internal work.

Tech Team Lead & Manager Dec 2017 - Nov 2019 | Full-time

Noobis, Inc. | Buffalo, New York, USA (Remote)

- Ran the 10 to 12 person tech team and the development of the company's flagship SaaS products.
- 80+ client web and mobile projects delivered at Noobis, from scoping to release.
- Introduced Agile practices and pitched new in-house product ideas.

Software Engineer, then Senior Software Engineer Sep 2011 - Nov 2017 | Full-time

Noobis, Inc. | Buffalo, New York, USA (Remote)

- Promoted to senior software engineer in Jun 2015.
- Formed and led the backend and API team for client and in-house applications.

PROJECTS

- Open source packages on Packagist and core contributions on GitHub (pkp/ojs, pkp/pkp-lib).
- Client projects include dentallmanager.nl (Laravel, Vue.js, Node.js), serlockintegrated.com (Laravel, Vue.js), lawmaker.io (Ruby on Rails), mitragaia.com (WordPress e-commerce) and buffalocitymission.org (Laravel, WordPress).

EDUCATION

Bachelor of Science in Computer Science and Engineering

Rajshahi University of Engineering & Technology (RUET), Bangladesh | Feb 2007 - Jul 2011

CERTIFICATION

Certified Laravel Developer, Laravel (Apr 2022)

LANGUAGES

English (professional working proficiency), Bengali (native)
